Fellow P&DARCS Members

Hello everyone.

It almost seems like a case of “Déjà vu” but we have had to temporarily close access to the field once again. The cause this time is not our lingering COVID cloud but the clouds of summer storms.

Not a great situation for us to be in but the ground is very, very soft in all areas including the carparks.

Access to the western car park was blocked off last week and there is still significant water lying in the pit areas. With heavy rainfall we have had over the past few weeks, the water has not been able to drain off giving soft and slippery conditions everywhere.

Walking and dragging models over the ground will create tracks and impressions throughout the field. This will lead to making the surface very rough once it dries out and mowing operations very difficult as well. We also have the issue of slippery conditions under foot when alighting from our cars.

This closure will only be effective for a few days and we will reassess the situation on Wednesday. We just need a little bit of summer to grace our skies for a change!
